Re: WR 25-7717 (a23290)

Dear Craig,

It has come to my attention that issues regarding water use and distribution from the Nielson Spring are again surfacing. It is my opinion that this will always be a conflict until both parties have the appropriate measuring devices in place where the water is diverted to each user at the spring. I am therefore requiring that the Petersen water and the Larson water have separate, accurate and accessible measuring devices installed. I would recommend a recording device that records and totalizes the flows on a continual basis. A simple meter that meets this criteria is the AquaPod Water Level Measurement System. This or a similar meter can be acquired through Intermountain Environmental Inc. located in Logan. The cost for the metering devices and the appurtenant works will be the responsibility of the water user. The costs for these recording the readings will be assessed to each user and included in the Little Bear River distribution system.

I can assist in putting together a design that will meet these requirements. Please contact me at your earliest convenience and let me know what your schedule is.

Respectfully;

K. Greg Hansen
Little Bear River Water Commissioner
